

**Request for an 1115 Waiver to Provide Family Planning Coverage to Women
and Men between the Ages of 18 and 49 with Gross Income Below 200 Percent of
Poverty**

**Prepared by
New Jersey Division of Medical Assistance and Health Services
New Jersey Department of Human Services**

October 2009

New Jersey is applying for this waiver to create a program called the NJ Family Planning Expansion Project with the purpose of expanding family planning services to a new population of women; which will help them plan their pregnancies therefore reducing the social and economic costs associated with unintended and mistimed pregnancies. It intends to cover women and men between the ages of 18 and 49 with income equal to or below 200% of the federal poverty level (FPL).

Background

The New Jersey Department of Human Services (NJ DHS), Division of Medical Assistance and Health Services (NJ DMAHS), administers the Medicaid and NJ FamilyCare programs. The Medicaid program provides health insurance to parents/caretakers and dependent children, pregnant women and people who are aged, blind or disabled. The NJ FamilyCare program is a health insurance program for uninsured children whose family income is too high for them to qualify for “traditional” New Jersey Medicaid but not high enough to be able to afford private health insurance. Some low-income uninsured parents/caretakers are also eligible for NJ FamilyCare. Currently, there are over 1 million beneficiaries enrolled in NJ FamilyCare/Medicaid.

NJ FamilyCare/Medicaid currently covers pregnant women with income equal to or below 200% FPL. These women are covered 60-days post partum before being terminated from the program. NJ FamilyCare/Medicaid does not cover women if they are over 20, have no dependent children, are not pregnant or disabled. Currently, women in New Jersey who do not have private health coverage must pay for family planning services themselves or seek services at Title X family planning clinics, which are funded by a federal grant program to provide family planning services, or a Federally Qualified Health Center (FQHC).

Current Situation

New Jersey has a population of 8.7 million residents, 51% of which are females. Almost 42% of the women in New Jersey are in their childbearing years (15-44 years of age). Over 131,000 individuals including over 123,000 women and over 8,000 men used a Title X clinic in 2008 and over 126,000 are under 200% federal poverty level (FPL) of which over 65,000 were uninsured .ⁱ The Federally Qualified Health Centers had over 19,000 women access their clinics for family planning services.

According to the Guttmacher Institute, “In New Jersey, over 211,000 of the 1.8 million women of childbearing age becomes pregnant each year. Fifty-five percent of these pregnancies result in live births and 31% result in abortions; the remainder end in miscarriage.”ⁱⁱ Over 1 million women in New Jersey are in need of contraceptive services and supplies. Almost 400,000 of these women have incomes below 250% FPL and are in need of publicly supported family planning services.ⁱⁱⁱ “In New Jersey, 9% of women aged 15-44 have incomes below the federal poverty level, and 20% of all women in this age-group are uninsured.”^{iv} According to the NJ Center for Health Statistics, over the past several decades, birth rates have declined among younger women while rising among older women...more that half of births (55%) occurred to women aged 25-34 years.^v

The Guttmacher Institute Contraception Counts states, “the United State has one of the highest rates of unintended pregnancy in the industrialized world...and states can play an active role in women avoiding unintended pregnancies.”^{vi} Nationally, about 60% of all pregnancies are unintended, mistimed or unwanted.^{vii} An estimated one out of every three recent births in New Jersey was either mistimed (26%) or unwanted (8%) pregnancy.^{viii}

There are many risks associated with unintended pregnancies. Women with unintended pregnancies are 1.6 times more likely to delay entry into prenatal care, which can increase the health risks for the mother and baby.^{ix x xi xii} Unintended or mistimed pregnancies can lead to complications including pre-term delivery and low birth weight.^{xiii xiv xv} In New Jersey, 10% of all births are preterm and 8% of babies have low birth weight.

Project Goals and Objectives

This project will allow NJ FamilyCare/Medicaid to expand family planning services to a new population of women and men. The project goal and objectives for the NJ Family Planning Expansion project is to help women plan their pregnancies therefore reducing the social and economic costs associated with unintended and mistimed pregnancies.

Goal

Reduce the number of unintended and mistimed pregnancies and improve maternal health and newborn outcomes

Objectives

- Increase the number of women and men receiving family planning services from Medicaid
- Reduce the number of pregnancies for the women in the waiver population
- Reduce the proportion of Medicaid births spaced less than two years apart for women in the waiver population

- Decrease the number of Medicaid paid pregnancies and deliveries, which will reduce annual expenditures for prenatal care, delivery and newborn care.

Project Design

Provider Network

New Jersey intends to use the current Title X clinics and the FQHCS as the provider network for this project. Family planning clinics in New Jersey play a vital role in the reproductive health of low-income women. According to the Center for Reproductive Rights, family planning clinics “serve as an entry point into the health-care system for young women and low-income people in this country...and offer contraceptive services and education that prevent unintended pregnancy, testing and treatment for sexually transmissible infections, and other primary reproductive health care.”^{xvi} In New Jersey, publicly funded family planning clinics help women prevent 30,200 unintended pregnancies each year.”^{xvii}

There are currently 16 Title X agencies with 55 operating clinic sites statewide, with at least one in every county, and all are enrolled as Fee-For-Service (FFS) Medicaid providers. In New Jersey there are two Title X grantees, the Department of Health and Senior Services and the New Jersey Family Planning League. The Title X Federal funds are allocated through 11 New Jersey Department of Health and Senior Services delegate agencies and 5 New Jersey Family Planning League delegate agencies. See Appendix A for a complete list of clinics.

The FQHCs in New Jersey provide comprehensive community-based primary health care with an emphasis on maternal and child health which seeks to provide quality care for people from prenatal to old age.^{xviii} There are currently 20 FQHCs statewide, with 99 operating clinics serving 19 of the 21 counties. See Appendix B for a complete list of FQHCs.

Primary Care Referrals

When a woman or man applies for the NJ Family Planning Expansion Program, it is required as part of this waiver that the provider make the necessary primary care referral. When appropriate the Title X clinics may refer clients to the FQHCs and the FQHCs may refer to the Title X clinics. The Title X clinics and FQHCs have an existing relationship and refer clients on an on-going basis.

The New Jersey Primary Care Association, the organization that represents the FQHCs, is supportive of the NJ Family Planning Expansion Project to provide Medicaid family planning services to more women in New Jersey. See Appendix C for their letter in support of this waiver.

Eligible Population

The NJ Family Planning Expansion Project will expand family planning services to qualified women and men between the ages of 18-49 with gross income equal to or below 200% FPL. Table 1 shows the number of women and men we estimate to be eligible and accessing services for each demonstration year based on the number of woman and men currently accessing services at the Title X clinics and FQHCs for family planning services.

Table 1

Year	Enrollment
Year 1	66,057
Year 2	67,793
Year 3	69,601
Year 4	71,485
Year 5	73,451

Eligibility Determination

New Jersey will be using a Point-of-Service Application to determine eligibility for women and men between the age of 18 and 49 who present at clinics for family planning services who do not otherwise qualify for NJ FamilyCare/Medicaid. The use of Point-of Service application allows the applicant to apply and obtain family planning services immediately and that the provider is reimbursed for these services.

An electronic application will be completed at the clinic. The electronic application will then be sent to the statewide eligibility determination agency for processing – the on-line application will mirror the NJ FamilyCare/Medicaid online application. The application captures information about income, health insurance, family size and citizenship/immigration status.

The applicant will be allowed to self-declare income. The clinic will not be responsible for obtaining proof of income, however the statewide eligibility determination agency staff will be required to check existing databases to verify that the income provided is accurate. If the income cannot be verified the vendor will ask for additional income information from the applicant, such as pay stubs or tax returns.

The statewide eligibility determination agency will have the ability to use existing databases to verify the citizenship/immigration status if necessary, therefore helping to expedite the enrollment process. Once a final eligibility determination has been made a card will be sent to the client and the clinic can verify eligibility in the system and bill for the services provided on the initial visit.

Eligibility Redetermination Process

The statewide eligibility determination agency will renew those enrolled in the NJ Family Planning Expansion Project annually, using an administrative renewal process if possible. Otherwise, a pre-printed renewal form will be sent 75 days before their 12-month period of eligibility ends and one reminder notice 45 days before termination.

Covered Services

The Family Planning Expansion Project will cover family planning services currently provided through NJ FamilyCare/Medicaid for women and men through family planning clinics, FQHCs and hospitals. See Appendix D for a list of covered services.

Outreach

Outreach will be important for the success of this program, enabling us to maximize enrollment of eligible women and men. Brochures and posters will be developed with information about the NJ Family Planning Expansion Project and will be made available at various agencies throughout New Jersey including Title X clinics, Federally Qualified Health Centers, Hospitals, Maternal and Child Health Consortia, Healthy Mothers Health Babies, WIC, Local County Welfare Agencies, NJ FamilyCare Outreach offices and Medical Assistance Customer Centers. DMAHS will be updating their general NJ FamilyCare/Medicaid training module, presented to various groups statewide. In addition they will train clinic staff on the program eligibility requirements and completing the on-line application.

Public Process

An Interdepartmental workgroup, with the Department of Human Services and Department of Health and Senior Services, was established to develop the NJ Family Planning Expansion project in New Jersey. Staff from these two departments met on a regular basis to develop the waiver application.

Staff from the Department of Human Services and Department of Health and Senior Services met with members of the NJ Family Planning Association, NJ Family Planning League and Planned Parenthood to discuss the proposed NJ Family Planning Expansion project. They were given an opportunity to review the waiver application and offer comment. We have incorporated many of the recommendations suggested by these groups.

Commissioner Heather Howard from the New Jersey Department of Health and Senior Services convened a Prenatal Task Force in February 2008. The Task Force

included experts in the field of Maternal and Child Health. The Commissioner's Task Force on Prenatal Care found that unintended pregnancy or a lack of awareness of a pregnancy can delay the initiation of early prenatal care. The Task Force strongly recommended that efforts to improve access to early prenatal care must address the factors related to unintended pregnancy and lack of early pregnancy awareness by focusing on women before they become pregnant.

Governor Corzine held a forum on the benefits of expanding family planning services, which was attended by over 40 advocates, healthcare and family planning providers. The family planning waiver was major point of discussion at this forum. It was a chance for advocates to voice their issues, concerns and recommendations on how to improve the process.

The final submitted version of the waiver request is posted on the Department of Human Services website. Notices posted in newspapers, medical assistance customer centers, county welfare agencies, and on the DHS website will advise that the waiver request is being submitted to CMS, and offer the opportunity for additional comments.

Proposed rules are being drafted. There will be a 60 day public comment period before adoption of the final regulations.

Project Administration

The New Jersey Department of Human Services, Division of Medical Assistance and Health Services, administers the NJ FamilyCare/Medicaid in New Jersey. For the NJ Family Planning Expansion Project, clients will be enrolled in Fee-for-Service (FFS) Medicaid. Women and men can apply and receive services through one of the Title X clinics or FQHCs statewide who are also Medicaid FFS providers. Our Statewide Eligibility Determination Agency will process the applications for this project.

Evaluation

The following hypotheses have been developed to help New Jersey demonstrate the effectiveness of their waiver over five years to meet the goals and objectives that have been outlined for this project.

Hypothesis 1: The demonstration waiver will result in an increase in number of eligible women and men aged 18-49 receiving Medicaid paid family planning services in New Jersey.^{xix}

Measure: The number of women and men who receive a Medicaid paid family planning service to be measured at the end of every waiver year.

Data required: The number of women and men uniquely identified as part of the waiver receiving a Medicaid paid family planning service.

Data Source:	New Jersey's Medicaid Management Information System (NJMMIS), which captures claim and financial information for all Medicaid recipients.
Hypothesis 2:	The demonstration waiver will result in the reduction of pregnancies of women aged 18-49 enrolled in the NJ Family Planning Expansion Project compared to pregnancies among all New Jersey women between 18 and 49.
Measure:	The number of pregnancies experienced by a sample population of women after enrolling in the waiver as compared to the number of self-reported pregnancies of women in the waiver population prior to them enrolling in the waiver.
Data required:	Enrollment data from claims information from NJMMIS, statewide eligibility determination agency report from the on-line application
Data source:	Statewide eligibility determination agency reports and NJMMIS
Hypothesis 3:	The demonstration waiver will result in an increased spacing of pregnancies among women aged 18-49 enrolled in the NJ Family Planning Expansion Project.
Measure:	The spacing of pregnancies experienced by a sample population of women with a Medicaid paid birth during a specific fiscal year that has a subsequent Medicaid paid birth within two years.
Data required:	Eligibility and claims information from NJMMIS
Data source:	NJMMIS
Hypothesis 4:	The demonstration waiver will produce a net annual savings in State and Federal Medicaid expenditures for birth-related services per women aged 18-49 in the Medicaid program. ^{xx}
Measure:	The estimated fiscal year Medicaid savings from births prevented by the waiver less fiscal year Medicaid family planning expenditures for the waiver target population, based on a sample of women who used the Title X clinic and subsequently enrolled in the waiver
Data required:	The difference between the expected number of Medicaid paid births, due to a conception in a given fiscal year, to the waiver target population and the actual number of Medicaid paid births to this population multiplied by the average associated prenatal, birth,

newborn and infant care costs. The total fiscal year Medicaid family planning expenditures for the waiver target population.

Data Source: New Jersey Medicaid Management Information System, which includes claim and financial information.

Conclusion

This waiver application has outlined the need for this project in New Jersey. The challenge is how to get those women who have never obtained family planning services, as well as those who have received them but have fallen off the Medicaid roles after giving birth, to make family planning a part of their everyday lives.

Our hope is to cultivate in those whom we enroll in the NJ Family Planning Expansion Project a realization that regularity in obtaining these services is an important part of their reproductive health and quality of life. This project's goal is to make it easier for women of child bearing age to obtain routine family planning services and care, and to ensure these services are ongoing by maintaining continuous enrollment in the NJ Family Planning Expansion Project.

PO Box 712
Trenton, NJ 08625-0712

Dear Mr. Guhl;

On behalf of the New Jersey Primary Care Association (NJPCA), I am pleased to write this letter of support for your Family Planning Waiver to provide family planning coverage to women between the ages of 18 and 49 with income under 200% of the federal poverty level.

As you know, NJPCA is a not-for-profit organization that represents Federally Qualified Health Care (FQHC) centers statewide, serving over 350,000 patients in 19 of the 21 counties. FQHCs have a particular emphasis on maternal and child health and providing quality primary care from prenatal to old age.

NJPCA has worked collaboratively with the Division of Medical Assistance and Health Services (DMAHS) on a number of projects over the years and look forward to working on the development and implementation of the New Jersey Family Planning Expansion Project and playing an active role as a part of the provider network as well as supporting the referral for primary care to our FQHCs for this new eligibility group.

Sincerely,

Katherine Grant-Davis
President and CEO
